

1. This week, I discuss the VAUD project with Wu:
  - Define the interface of query condition and result
  - Separation of personal information view and statistics of “which” list
2. And I design the interface of VAUD with guan:
  - Menu view :
  - Data source
  - Map selection
    - ◆ Time line
    - ◆ Data visualization option
  - Legend
  - Screen view
  - Query node view
3. Design the node style:
  - Icon of the 4w and query button
  - CSS style
  - Node structuring
  - Node objectification
4. Encoding the line which connect the node.
5. Discuss the VAUD project with boss:
  - Divided the node into three type:
    - Query condition
    - Result (data/record)
    - Analysis
  - “Which” can be the query condition
  - Matching the query model with the Spatio-temporal SQL
  - Hover CSS
  - Language which descript the query process
  - Map selection adding
  - Rendering the statics charts

Next week:

Coding and discuss with Zhu and Guan. Also the group presentation
